# Rmd RevealJS and Decktape

To produce very low cost, easy to compile, easy to produce presentations, use these:

1. revealjs
2. revealjs_presentation
3. decktape

Use the revealjs r package to write revealjs documents in r markdown and knit to html. Then use decktape to conver html to pdf.

# revealjs and r

See the rmd file that generated this presentation.

# revealjs and r

Once the HTML file is created, we can use decktape to convert it to pdf:

- install decktape: install nodejs, npm install -g decktape
- to save results as image slides individually:
  - *decktape reveal –screenshots test_img.html test_img.pdf*
- to save results as a single pdf
  - *decktape reveal –size='2048x1536' test_img.html test_img.pdf*
  - gap issue with large size workaround

# Image Group One

# Image One JPG

- small jpg profile photo
- Equation: $1 + 2 = 3$

# Two JPGs Together

- Two Images Together Same Page
- Equation: $1 + 2 = 3$

# Image Group Two

# JPG and SVG

- svg and then JPG
