

# BASH Pull and Push From GIT Remote Repository

Go back to [Fan's Tex4Econ and Miscellaneous Repository](#).

## Basic BASH

**Pull from Remote Repo and Create a New Local Directory** Sample pull bash file is shown below.

```
#!/usr/bin/bash
```

```
# This bash file, after making the appropriate adjustments pulls from a remote
# project and creates a new local folder.
```

```
# ADJUT 1 STRREPO
# STRREPO='Py4Econ'
STRREPO='PrjHealthProductionCGW'
```

```
if [ -d "/g/repos/" ]
then
    echo "Computer has g drive, on precision"
    STRREPOWTHPATH="/g/repos/${STRREPO}"
else
    echo "Computer has c drive, on vostro"
    STRREPOWTHPATH="/c/Users/fan/${STRREPO}"
fi
echo "${STRREPOWTHPATH}"
```

```
echo pull single repository
echo going to pull from $STRREPOWTHPATH
```

```
# generate all needed key repositories
mkdir $STRREPOWTHPATH

# Initialize
cd $STRREPOWTHPATH

# ADJUT 2.1 ACCOUNT
# Set global config settings, in ~/.gitconfig
git config --global user.name "Fan Wang"
git config --global user.email wangfanbsg75@live.com
```

```
# Initialize
git init
# ADJUT 2.2 ACCOUNT
git remote add github git@github.com:fanwangecon/$STRREPO

# Secure
eval "$(ssh-agent)"
# ssh-add ~/.ssh/id_rsa_yy
```

```
ssh-add ~/.ssh/id_rsa

# Pull
cd $STRREPOWTHPATH
# ADJUT 3 root name
git pull github main
# git pull github master

# Open Repository in Atom
atom $STRREPOWTHPATH
```
