Managed Security Monitoring (SOC)
Hackers Don't Sleep, Neither Do We

Attackers don't take a day off, do you?

Having continuous monitoring is more important now than ever. We've always guarded our physical assets around the clock, but now that our digital assets can be accessed from across the globe 24x7x365, cybersecurity monitoring has become a necessity for many organizations. At CCSI, we monitor, detect and mitigate cybersecurity threats in our client's networks 24x7. Adversaries are in networks for an estimated 140 days before being detected. With CCSI's managed SOC offering, we aim to drastically reduce this detection time and contain threats in your environment to minimize risk.

Our managed SOC is staffed by trained security analysts using enterprise tools detect attackers throughout the lifecycle of attack. With the CCSI's managed SOC offering our clients receive years of security leadership with trained analysts using proven tools to assist with protecting their environments. Not only are we protecting our clients, but we've gone through a SOC2 Type II audit to validate that we're protecting our own network and how we manage our client environments. Watching for threats is only half the offering. Mitigating and leading your team through active incidents is the additional value we bring to clients who are in need of managed security services.

Due to this high standard we've built our Managed SOC offering to cover your assets from endpoint to cloud and everything in between. We can also rely on your current security infrastructure to add additional value to your current investment by monitoring your current technology (co-managed) or adding it into our fully managed offering. Bringing in the proper people, process, and technology to our Managed SOC offering allows our clients to benefit from our experienced leadership with enterprise tools and a process developed together with you as a partner to reduce risk today.

Analyst Dashboards & Threat Reports

Managed Security Monitoring Features

- Log Management
- Asset Discovery
- User Behavior Analytics
- Network Packet Captures
- Log Collection and Correlation
- AI and Behavioral Rule Alerting
- Vulnerability Management Integration
- Security Orchestration & Automation (SAO)
- Endpoint Security Integration
- File Integrity Management
- Threat Feeds and Intelligence

Why CCSI?

CCSI provides the highest quality of service in the industry for the full spectrum of technologies–from containers to PCs, network infrastructures, managed services, IP telephony, cybersecurity, cloud services, SD-WAN, to storage solutions. We provide architecture with innovation. Partner with us and discover what sets us apart from the rest.
