

# All-in-one security for businesses

## Trusted Connection

Many businesses like yours are facing formidable security challenges.

**The challenge: Help secure your network connectivity without overburdening your IT staff.**

**The solution: Simplify your network security with Verizon Trusted Connection.**

Cut through the complexities of using disjointed network security solutions and keep pace with the evolving threat landscape. Trusted Connection is a network connectivity and security solution that helps safeguard access to your critical clouds while efficiently addressing many of the issues businesses face today:

- Changing between network and security views is inefficient
- Proliferation of cloud app usage increases potential attack surfaces
- Scarce IT security resources and expertise
- Having data, but lacking the insights to know what actions to take
- Excessive time spent setting up and managing network security

### Simpler and more robust network security

Add extra protection for business internet and mobile connections while simplifying the monitoring and management of network security through a single pane of glass.

Trusted Connection helps you efficiently manage disparate users and adopt modern security protocols. It provides powerful, actionable data insights while delivering a feature-rich, unified connectivity experience with simplified onboarding, management and 24/7 expert support.

## Key features

Connect smoothly and in a secure manner to virtually any cloud from nearly any endpoint device, including nonmobile connected devices such as PCs and tablets.

Easily leverage zero trust principles for user/device authentication and cloud application security.

Monitor and take action utilizing a centralized portal that combines network and security views for management, analytics and reporting.

Get more peace of mind with our 100% availability service level agreement (SLA) for each Verizon Wireless Business Internet location.

## Enjoy a clearer view of your network performance and health from our intuitive portal

Trusted Connection gives you a detailed overview of your Trusted Connection-enabled devices, so you can easily monitor your tools and network access points. Its user-friendly interface offers simplified onboarding, management and support. And its centralized portal allows you to:

- See key metrics in one place.
- Set access policies for end users and groups.
- Get alerts and reporting for insights and actions across network and security.
- Identify issues and focus your team's efforts where they're most needed.
- Manage secure access to sensitive data and resources.
- Create custom user and group access policies for applications so that users and groups can only access permitted resources. For example, Finance can access QuickBooks, but the Customer Support team cannot.

## Why Verizon

Verizon is a proven network and security leader with more than 30 years managing complex global networks and processing more than 1.7 trillion security events annually. We have decades of experience taking on the bad actors and protecting our customers from their actions.

### A solution to fit your needs across wireless business internet and mobility

When you compare our solutions in depth, you will discover that nothing else really compares.

Trusted Connection provides an easy way to help keep employees productive with fast and secure connectivity to remote applications. For companies that need to manage sensitive information differently among various users or groups, Trusted Connection Plus expands security control options.

By 2028, modernization efforts will culminate in 70% of workloads running in a cloud environment, up from 25% in 2023.”<sup>1</sup>
